i am a long time listener to the satellite radio, as a truck driver i depend on the xm radio to get me the news when i need it and where i need it. try going across the dessert and have no radio signal and need it for the weather report. it has also helped plan my routes by the weather in that area. i can access it by 1 button not by having to try to find a station as i am trying to concentrate on my driving , that can lead to accidents. please dont take the xm weather and instant traffic from us we depend on it. the xm radio is great when u want to listen to music and have little to no commericals in them, we are not interested in buying houses or cars from other states so why would we want to hear the advertisements. xm is the best investment i have made and i hope we can plan on keeping it around for a long while.
